

DM Transportation Management

Delivering Time and Cost Savings Across Your Entire Organization

PURCHASING

Shine a light on the hidden transportation costs buried in your Cost Of Goods Sold (COGS) and hold your vendors accountable to a higher standard. DM will analyze your inbound shipping and identify areas to reduce costs. Then we'll implement a routing program to optimize savings and service as well as monitor and enforce compliance.

RECEIVING

The pressures of Just In Time (JIT) inventory for both manufacturing and distribution continue to increase. DM relieves that strain by streamlining the number of carriers delivering to your company and providing visibility to all your inbound shipments on our web-based Transportation Management System (TMS) EasyFreight™. Change "It's where?" to "It's here!".

SHIPPING

Who isn't having to do more with less nowadays? The calls, emails and website visits to multiple carriers to get a price are time consuming – not to mention the multiple calls, emails and website visits to schedule the pickups. Additionally, you're choosing a carrier not just based on rates but transit time, insurance coverage and performance. DM streamlines this process by analyzing your shipping patterns and providing a core group of quality carriers so you can compare rates, transit times and insurance coverage all on our web-based TMS EasyFreight™. Also, you can create paperwork and schedule pickups online so you can focus on all the other calls and emails that you're receiving.

SALES

Competition is fierce and everyone is seeking an advantage when securing additional sales. DM provides the edge you're looking for with a few clicks of a mouse. Your entire sales team will have access to our accurate web-based TMS EasyFreight™. Instantly view competitive prices and transit times from multiple carriers to quickly provide your customers the pricing they want and the sales you need.

CUSTOMER SERVICE

As sales continue to rise, so does the burden on your customer service staff. Tracking shipments and resolving delivery-related issues in addition to filing and following up on claims means countless calls, emails and going to multiple websites to gather the information needed. DM's Single Point Of Contact (SPOC) program shifts that load from you to us. Call, click or email for a rapid resolution to all your questions.

ACCOUNTS PAYABLE

Convert those stacks of carrier payables to one simple, easy-to-understand invoice from DM. We'll audit the carrier invoices to ensure accuracy, file for refunds to get you the money you deserve and handle all your General Ledger (G/L) coding needs. You can receive your invoices as a PDF or a flat file to upload into your accounting system or access them through our web-based TMS EasyFreight™. The only hard choice you'll have is what to do with all your extra time!

IT DEPARTMENT

Tired of being on the bottom of IT's never-ending list of projects? Hesitant to make a major investment in an unproven system you're not sure will meet your needs? DM's web-based TMS is written in the latest code utilizing reliable technology. Best of all, EasyFreight™ was created based on our clients' input and feedback so it is customer focused. Oh, and by the way...did we mention it's free?
